

# A compact academic paper

## Abstract

We evaluate a semantic-first document architecture using fixed-rendition mapping.

## Methods

Stable node identities were preserved during a targeted result update [1].

## Results

Table 4 reports the exact experimental result: FROC improved from baseline to 0.901.

Table 4. Primary result.

| Measure | Value |
|---------|-------|
| FROC    | 0.901 |

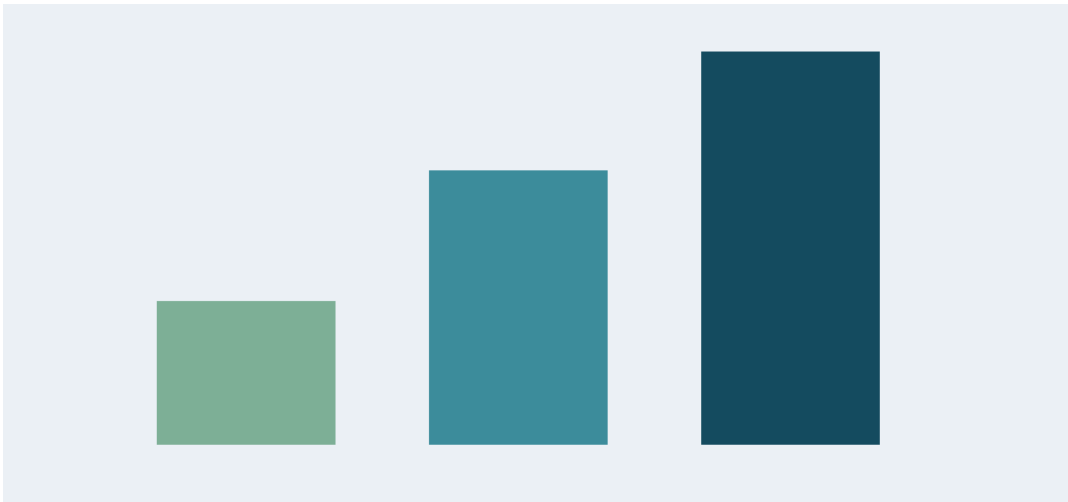

Figure 1. Primary result visualization.
